Using an LLM as a classifier

# What is labeling?

Sorting each customer comment into a category: delivery, food quality, price, service, other.

**“The pizza was amazing, too bad it showed up an hour late.”**

READER A

## food quality

“The comment is about the pizza.”

READER B

## delivery

“The problem was the hour late.”

**Two careful people, two labels. The rule was not clear enough.**

Using an LLM as a classifier

# The guide becomes the prompt

FOR A PERSON

## A labeling guide

The categories
What each one means
Rules for the hard cases

FOR A MODEL

## A prompt

The categories
What each one means
Rules for the hard cases

A large language model (LLM) reads a comment and returns a label. That is called classification.

**Same words, same job.**
